

## CSI: A “Sound” Solution for North Penn School District

**The Problem:** The North Penn (Lansdale, PA) School District lacked an adequate audio system for outdoor school-year programs, including athletic contests and High School graduation ceremonies. The District had been renting systems on an as-needed basis; this proved to be costly and often resulted in poor sound quality at these significant events.

**The Needs:** A portable, easy-to-set-up system for graduation ceremonies and a permanent sound system that broadcasts announcements and pre-recorded music clearly during sporting events. It must be more cost-effective than renting and be integrated with the District’s existing CD player and wireless microphone systems.

**The CSI Solution:** A customized professional stadium bleacher sound system, with permanent and portable components, that assimilated portions of the current system. CSI installed the new system using existing infrastructure. The entire package included training and service agreements, as well as arranging for financial assistance via the COSTARS program.

**The Result:** The system was installed in time for use at the 2010 High School Graduation.

*“The sound system that you helped me design and spec worked flawlessly and sounded great. We received numerous comments on how clear the sound was, and how it sounded better than ever before. Thanks again for all of your help with the project. I look forward to working with you again soon.”*
